## Lessons In OPTOMETRY

Speaking of near-sightedness, can it be corrected or cured? It can be corrected but not cured. The proper lenses placed before the eyes by an Optometrist will result in making the distant vision normal in many cases and in improving it in every case. Is myopia a handicap? A decided handicap and it should always get prompt attention. What is progressive myopia? It is a condition where the sight of a near-sighted person gradually becomes shorter and because of the possibility of this condition arising all near-sighted children especially, should receive the attention of an Optometrist as soon as possible.
